

CDI News

# [ CDI Features Implemented ]

- Grouped WRITE + status readback
  - Fill the output data buffer with the status values !
- New calibration rule for “SEND.CLBR”
  - =<value> will apply the value given as input regardless of external input.

# [ CDI Address database ]

- ADDRESS column deprecated
- LONG\_NAME column deprecated
- Instead use:
  - ADDRESS\_BASE (up to 16 values)
  - ADDRESS\_PARAMETERS (up to 16 values)
  - ADDRESS\_MAP (64 characters)
- e.g.
  - ADDRESS = “1.17:48:64” becomes
    - ADDRESS\_BASE = “1.17”
    - ADDRESS\_PARAMETERS = “48:64”
  - LONG\_NAME = Motor[].SolIPositionAbs becomes
    - ADDRESS\_MAP = Motor[].SolIPositionAbs
- Why? -> rationalize the address database for the new cdi database manager / verifier !!!
