Igor Khokhriakov

EZ Tine interface for java client

```java
@Before
public void before(){
    client = new TineClient("/PETRA/GLOBALS/#keyword");
}

@After
public void after(){
    client.close();
}

@Test
public void testSimple() throws Exception{
    for(int i = 0; i < 10; ++i){
        System.out.println(client.readAttribute("BeamCurrent").getKey());
        Thread.sleep(1100);
    }
}
```

Very simple… to subscribe to a change event

```java
@Test
public void testSubscribe() throws Exception{
    final CountDownLatch latch = new CountDownLatch(10);
    client.subscribeEvent("BeamCurrent", new EventCallback<Double>() {
        @Override
        public void onEvent(Map.Entry<Double, Timestamp> data) {
            System.out.println(data.getKey());
            latch.countDown();
        }

        @Override
        public void onError(Throwable th) {
            th.printStackTrace(System.err);
            latch.countDown();
        }
    });

    latch.await();

    client.unsubscribeEvent("BeamCurrent");
}
```

Import de.desy.tine.client.ez;

TineClient myClient = new TineClient(…)
